

HODAYA BAR SHALOM

Full Stack Developer | C#, .NET, SQL

sassonhodaya@gmail.com | 050-414-1547 | github.com/hodayasassonHS | linkedin.com/in/hodaya-sasson-b7bb4a274

PROFESSIONAL SUMMARY

Full Stack Developer with experience in C#, .NET, SQL, React.js and Vue.js. Experienced in building scalable web applications, REST APIs, and marketplace integrations. Passionate about clean code, software architecture, and delivering reliable solutions. Looking to contribute to impactful Full Stack development projects.

EXPERIENCE

Software Developer – Bentex

Dec 2023 – Present

- Developed and maintained backend services using **C#, .NET, ASP.NET Core**
- Engineered high-performance RESTful APIs supporting multi-marketplace integrations (Amazon, Walmart, Shopify), streamlining
- Worked with a **legacy VB.NET**-based system as part of a migration to modern **.NET** technologies, including analyzing the existing codebase, redesigning the solution architecture, and defining development tasks for the migration process.
- Built a comprehensive Shopify **Graph QL** Admin API integration powering automated product and metadata synchronization, scheduled reporting tasks, and bulk catalog operations — significantly reducing manual intervention and
- Experience with **ETL** processes for processing, transforming, and managing large volumes of sales and product data.
- Processed and managed large-scale product data and **JSON feeds**
- Implemented image processing using **OpenCV Sharp** and **Python** to generate automated product visuals
- Developing responsive frontend features using **Blazor, Razor Pages, React.js, and Vue.js**.
- Worked extensively with **SQL**, including **views** for performance optimization, **triggers, SP**, and data updates
- implemented **Claude AI Agents** to automate and debug real-world processes.
- built reusable **AI Skills** that define system behaviors in a consistent and controlled manner
- Designed and implemented **LLM**-powered product translation workflows.

Data Engineering – Elementor

Jul 2023 – Oct 2023

During the bootcamp, I contributed to a team project involving real-time data streaming and monitoring. The solution leveraged **Kafka** for stream processing, **PostgreSQL** for data storage, and **AWS** for cloud deployment. This experience provided practical exposure to building scalable data pipelines, processing real-time events, and developing monitoring solutions for large-scale data systems.

Freelance Developer– DSPRO

Jul 2022 –August 2023

Developed a dynamic product description system based on a hierarchical structure, enabling users to navigate between categories and subcategories and dynamically select product attributes. Developed a visual sales forecasting interface and built interactive user interfaces using **React** Hooks, PrimeReact, and MUI, with Redux for state management. Worked with **MySQL** and **Node.js** to develop and manage system processes, while collaborating closely with the **UI/UX** team and using Figma for design

PROJECTS (ACADEMIC)

- Data Pipelines with Docker & Airflow** Built orchestrated workflows and real-time dashboards (Plotly Dash)
- CIFAR-10 Image Classification** Developed CNN model with basic monitoring using MLflow
- Apache Spark Data Processing** Performed large-scale data cleaning, feature engineering, and model evaluation

SKILLS

Languages:	C#, Java, Python, JavaScript , c++,Node.js	Backend :	.NET Core, ASP.NET Core, Spring Boot, REST APIs, GraphQL
Databases:	SQL Server, PostgreSQL, MongoDB	Data Engineering:	Apache Kafka, Apache Airflow, Apache Spark
Cloud & DevOps:	AWS, Docker, Git	Tools:	Claude Code, Visual Studio, Postman
Frontend:	Blazor, Razor Pages, Vue.js , React	AI & ML :	MLflow, LLM,Rag , Prompt Engineering, Machine Learning, Computer Vision

EDUCATION

- Software Engineering Certificate (Mahat)
- Kama-Tech Data Science Bootcamp (with Elementor)
- AI Courses (Ultra-Code, Extra-Code, Coursera)

STRENGTHS

LANGUAGES

Fast Learner • Analytical Thinking • Strong Ownership • High Responsibility Hebrew (Native) | English (Professional)
